The company and its responsibility for the future

SISamos Refrigeration Ltd was established in Limassol in 1968 for the production of commercial refrigerators and metal shelving in order to satisfy the local market. Today, SISamos is the largest manufacturing plant in Cyprus with a major impact in Europe and the Middle East, exporting to more than 12 countries. Operating a modern plant of 6,500 sq. meters with fully automated, high technology computerized machinery and fully trained personnel, the company is able to lead the sector of design, development, and production of high quality products, satisfying the high demands of the food and retail industry.

SISamos has developed a very large product range of commercial refrigerators and metal shelving systems consisting of its own production and imports from selected esteemed companies around the world that supply complimentary products through exclusive trade agreements. This, in conjunction with the company's ability to design and develop custom-made solutions, enables SISamos to offer the ideal solution to the professional customer.

With the accession of Cyprus into the European Union, SISamos is again ahead of the market by introducing new production technologies and advanced logistics thus harmonizing all its products with the European Quality Standards and HACCP. As a result of the continuous effort for higher quality, the company has been accredited in 2004 with ISO 9001:2000. Always thriving for total excellence, the company has efficiently managed and developed its human resources and can now offer a "superior service" to its customers from beginning to end. The detailed design and production as per customer's needs, the technical installation and prompt service offered by fully qualified refrigeration engineers, ensures the investment and guarantees success.
